

## Job Description: Senior Magento Developer

We're looking for an experienced and talented PHP/MySQL developer to work on a wide range of Magento projects from the simple store skinning to the crazy custom and innovative development our clients have come to expect.

Whilst the majority of the role is based around Magento, you'll need to be able to work with other platforms (such as Expression Engine and WordPress) and equally be confident in building your own from scratch.

You are currently either a strong middleweight developer who wants to extend your skill set, or you are a senior developer in a small team who has loads of great ideas that you want to unleash. You will be comfortable dealing with customers, but this will not be the core focus of this role. This is a hands-on role requiring a true all rounder.

Are you talented, passionate, been around for longer than 3 years, and have an insane attention to detail? We would love to hear from you.

## You will need to...

(Aside from being an awesome developer!):

- Create technical specifications
- Provide timescales and propose solutions
- Work to a standard only the Queen's most trusted staff would be proud of
- Work to a detailed specification
- Equally, use your initiative to solve a problem and achieve a goal
- Spot an out of place pixel from 300ft
- Develop the front-end and back-end of Magento stores
- Develop Magento modules for our clients
- Test your work thoroughly
- Fix any bugs
- Assist the rest of the team with custom development and support.

**Salary Range: £28,000 - £32,000**

## Key Responsibilities

Working with our Creative Team and Development Team to deliver the highest quality, innovative and robust Magento builds.

Mentoring our Junior Developers to ensure they follow best practice and the Un.titled way.

Motivated to be successful and meet our clients' expectations.

Deliver projects on time and on budget and be able to go the extra mile to ensure this happens when deadlines are tight.

## Key Technical Skills:

- Magento skinning and module development
- PHP5 (Object Oriented/MVC)
- MySQL HTML,
- CSS,
- Javascript/JQuery,
- XML Linux and Apache knowledge would be beneficial
- Experience using development frameworks such as Zend, CodeIgniter or CakePHP.
- High quality written and clear communication skills
- Additionally, we'd love it if you had the following (but we can live without it):
  - Experience working with Expression Engine
- Experience working in an agency environment
- Degree in relevant subject
- Experience using Photoshop or Illustrator
